Marking Scheme

Biology

Ordinary Level

Note to teachers and students on the use of published marking schemes

Marking schemes published by the State Examinations Commission are not intended to be standalone documents. They are an essential resource for examiners who receive training in the correct interpretation and application of the scheme. This training involves, among other things, marking samples of student work and discussing the marks awarded, so as to clarify the correct application of the scheme. The work of examiners is subsequently monitored by Advising Examiners to ensure consistent and accurate application of the marking scheme. This process is overseen by the Chief Examiner, usually assisted by a Chief Advising Examiner. The Chief Examiner is the final authority regarding whether or not the marking scheme has been correctly applied to any piece of candidate work.

Marking schemes are working documents. While a draft marking scheme is prepared in advance of the examination, the scheme is not finalised until examiners have applied it to candidates' work and the feedback from all examiners has been collated and considered in light of the full range of responses of candidates, the overall level of difficulty of the examination and the need to maintain consistency in standards from year to year. This published document contains the finalised scheme, as it was applied to all candidates' work.

In the case of marking schemes that include model solutions or answers, it should be noted that these are not intended to be exhaustive. Variations and alternatives may also be acceptable. Examiners must consider all answers on their merits, and will have consulted with their Advising Examiners when in doubt.

Future Marking Schemes

Assumptions about future marking schemes on the basis of past schemes should be avoided. While the underlying assessment principles remain the same, the details of the marking of a particular type of question may change in the context of the contribution of that question to the overall examination in a given year. The Chief Examiner in any given year has the responsibility to determine how best to ensure the fair and accurate assessment of candidates' work and to ensure consistency in the standard of the assessment from year to year. Accordingly, aspects of the structure, detail and application of the marking scheme for a particular examination are subject to change from one year to the next without notice.

Introduction

The marking scheme is a guide to awarding marks to candidates' answers. It is a concise and summarised guide and is constructed so as to minimise its word content. Examiners must conform to this scheme and may not allow marks for answering outside this scheme. The scheme contains key words, terms and phrases for which candidates may be awarded marks. This does not preclude synonyms or terms or phrases which convey the same meaning as the answer in the marking scheme. Although synonyms are generally acceptable, there may be instances where the scheme demands an exact scientific term or unequivocal response and will not accept alternatives. The descriptions, methods and definitions in the scheme are not exhaustive and alternative valid answers are acceptable. If it comes to the attention of an examiner that a candidate has presented a valid answer and there is no provision in the scheme for accepting this answer, then the examiner must first consult with his/ her advising examiner before awarding marks. As a general rule, if in doubt about any answer, examiners should consult their advising examiner before awarding marks.

How to use the marking scheme

- Where only one answer is required alternative answers are separated by 'or'.
- Where multiple answers are required each word, term or phrase for which marks are allocated is separated by a solidus (/) from the next word, term or phrase.
- The mark awarded for an answer appears in **bold** next to the answer, e.g. **3**.
- Where there are several parts in the answer to a question, the mark awarded for each part appears in brackets, e.g. **5(4)** means that there are five parts to the answer, each part allocated **4 marks**.
- The answers to subsections of a question may not necessarily be allocated a specific mark, e.g. there may be six parts to a question (a), (b), (c), (d), (e), (f) and a total of **20 marks** allocated to the question. The marking scheme might be as follows, **2(4) + 4(3)**. This means that the first two correct answers encountered are awarded **4 marks** each and each subsequent correct answer is awarded **3 marks**.
- A word or term that appears in brackets () is not a requirement of the answer, but is used to contextualise the answer or may be an alternative valid answer.

Some examples of the marking process

1. Key words or terms or phrases may be awarded marks, only if presented in the correct context.

Sample question:	Outline how you quantified a named animal in your habitat study.
Marking scheme states:	Named animal / captured / method of capture / counted / released / recaptured / data recorded / calculation described
	Any four 4(3)
Sample answer:	I captured hares using a pooter and counted them.

Although the candidate has named an animal, mentioned that it was captured, and how they caught it, the method of capture is not correct with regard to the animal. The candidate's answer can only be awarded **3(3)**.

2. Cancelled Answers

The following is an extract from **S.63o** *Instructions to Examiners, 2024 (for subjects being marked online)* (section 5.4, p.19):

"Where a candidate answers a question or part of a question once only and then cancels the answer, you should ignore the cancelling and treat the answer as if the candidate had not cancelled it."

Sample question:	What is pollination?	
Marking scheme states:	Transfer of pollen / from anther / to stigma.	3(3)
Sample answer:	Transfer of pollen by insect to stigma.	

The candidate has cancelled the answer and has not made another attempt to answer the question. The candidate may be awarded **2(3)** marks.

If an answer is cancelled and an alternative version given, the cancellation should be accepted and marks awarded, where merited, for the un-cancelled version only.

If two (or more) un-cancelled versions of an answer are given to the same question or part of a question, both (or all) should be marked and the answer accepted that yields the greater (greatest) number of marks. Points may not, however, be combined from multiple versions to arrive at a manufactured total.

3. Surplus Answers: [only in Section A] - A surplus wrong answer cancels the marks awarded for a correct answer.

(i)	Sample question 1:	The walls of xylem vessels are reinforced with	
	Marking scheme states:	Lignin	4 marks
	Sample answer:	Chitin, lignin	

There is a surplus incorrect answer, therefore the candidate scores **4** – **4** = **0** marks.

Sample answer: Lignin

The answer, which is correct, has been cancelled by the candidate, but there is no additional or surplus answer, therefore the candidate may be awarded **4 marks**.

Sample answer: Lignin, chitin

There is a surplus answer, which is incorrect, but it has been cancelled and as the candidate has given more than one answer (i.e. the candidate is answering the question more than once only), the cancelling can be accepted and s/he may be awarded **4 marks**.

(ii) <u>Sample question 2</u>: Name the four elements that are always present in protein.
 <u>Marking scheme states</u>: Carbon / hydrogen / oxygen / nitrogen 4(3)
 <u>Sample answer</u>: Carbon, hydrogen, oxygen, nitrogen, calcium

There is a surplus answer, which is incorrect, which cancels one of the correct answers, therefore the candidate is awarded **3(3)** marks.

Sample answer: Carbon, hydrogen, oxygen, calcium

There is no surplus answer – there are three correct answers, and therefore the candidate is awarded **3(3)** marks.

Sample answer: Carbon, hydrogen, oxygen, calcium, aluminium

There is a surplus answer, which is incorrect, and cancels one of the three correct answers, therefore the candidate is awarded **2(3)** marks.

Sample answer: Carbon, hydrogen, oxygen, calcium, aluminium

There is a surplus answer, which is incorrect, but it has been cancelled so the candidate may be awarded **3(3)** marks.

In the other sections of the paper (Sections B and C), there may be instances where a correct answer is nullified by the addition of an incorrect answer. This happens when the only acceptable answer is a specific word or term. Each such instance is indicated in the scheme by an asterisk *.

Annotations used in the marking

The scripts were marked by examiners using an online marking platform. The following table illustrates the various annotations (symbols) applied by the examiners when marking the scripts. The meaning and use of each of the annotations applied are also explained in the table. These annotations will be seen on a script if viewed as part of the appeal process. Annotations applied by an examiner will be viewed in red. Scripts that were also marked by an advising examiner will show annotations in a green colour.

Annotation	Meaning
~	This symbol indicates a correct response/ answer.
×	This symbol indicates an incorrect response/answer.
ş	This symbol is placed on all blank pages or part of page to indicate it has been seen by the examiner.
~	This symbol can be used by an examiner to indicate a part of a question answer of significance.
×°	Surplus incorrect answer. A surplus incorrect answer has cancelled a correct answer.

Bonus marks for answering through the medium of Irish

Bonus marks at the rate of 10% of the marks obtained will be given to a candidate who answers entirely through Irish and who obtains 75% or less of the total mark available in (i.e. 300 marks or less). In calculating the bonus to be applied, decimals are always rounded down, not up \neg e.g., 4.5 becomes 4; 4.9 becomes 4, etc. See below for when a candidate is awarded more than 300 marks.

Marcanna Breise as ucht freagairt trí Ghaeilge

Léiríonn an tábla thíos an méid marcanna breise ba chóir a bhronnadh ar iarrthóirí a ghnóthaíonn níos mó ná 75% d'iomlán na marcanna.

N.B. Ba chóir marcanna de réir an ghnáthráta a bhronnadh ar iarrthóirí nach ngnóthaíonn níos mó ná 75% d'iomlán na marcanna don scrúdú. Ba chóir freisin an marc bónais sin **a shlánú síos**.

Tábla 400 @ 10%

Bain úsáid as an tábla seo i gcás na n-ábhar a bhfuil 400 marc san iomlán ag gabháil leo agus inarb é 10% gnáthráta an bhónais.

Bain úsáid as an ngnáthráta i gcás 300 marc agus faoina bhun sin. Os cionn an mharc sin, féach an tábla thíos.

Que	estion 1								20
		5(4)							
(a)	Why is food required by all living organisms?								
	Energy or growth or repair								4
(b)	Name the other eleme	ent.							
	Nitrogen (or N)								4
(c)	Give one source of pro	otein in the diet.							
	Correct source named								4
(d)	Which of the following	g is a structural role of protein ir	n livir	ng or	ganis	sms?			
	Component of hair an	d nails							4
(e)	Which of the following	g is the smallest unit of a proteir	ו?						
	Amino acid								4
		Number of correct responses	1	2	3	4	5		
	Q1 (a) – (e)	Mark	4	8	12	16	20		

Ques	stion 2									20	
		6(3) + 2									
(a)	Is yeast a unicellula	ar or multicellular organism?									
	Unicellular										
(b)	What is the reason	for budding in yeast?									
	Reproduction										
(c)	Which part of the y	veast cell (X or Y) is the bud?									
	X										
(d)	Briefly describe wh	at happens to the bud.									
	Remains attached or detaches from parent cell										
(e)	What is the name of the organelle labelled Z ?										
	Nucleus										
(f)	On the diagram ab wall in the yeast ce	ove , draw an arrow from the la II.	abel	'Cell	wall	' to tl	ne lo	catio	on of	the cell	
	Label correctly poin	nting at cell wall									
(g)	Yeast is a member	of which kingdom?									
	Fungi										
	Q2 (a) – (g)	Number of correct responses	1	2	3	4	5	6	7		
	(a) = (g)	Mark	3	6	9	12	15	18	20		

Que	stion 3	20
(a)	Name structure A .	
	Chromosome	3
(b)	Name structure B .	
	(Spindle) fibre	3
(c)	Briefly describe what is happening during Stage 2 of mitosis.	
	(Duplicated chromosomes) line up on the equator of the cell	4
(d)	Briefly describe what is happening during Stage 3 of mitosis.	
	(Chromosomes) are pulled to the ends of the cell or (duplicated chromosomes) separate	4
(e)	How many daughter cells result from mitosis?	
	2	3
(f)	What is the function of mitosis in multicellular organisms?	
	Growth	3

Que	Question 4						
	5(4)						
(a)	Name the two main components (A and B) of a virus.						
	A: Protein (or capsid)						
	B: Nucleic acid (or DNA or RNA)	4					
(b)	Give one examples of harmful virus.						
	One harmful virus named	4					
(c)	Give an example of how viruses might be beneficial.						
	Used in genetic engineering or used in cancer research or other correct	4					
(d)	Which of the following sentences describe how viruses replicate?						
	Viruses replicate within living cells.						
	Number of correct responses 1 2 3 4 5						
	Q4 (a) - (d) Number of correct responses 1 2 3 4 5 Mark 4 8 12 16 20						

Que	stion	5									20
			6(3) + 2								
(a)	Give	e two function	s of the skeleton.								
	Stru	icture / suppo	rt / movement / blood cell proc	lucti	on / I	orote	ectio	n / ot	her c	corre	ct Any two
(b)	Nan	ne the bones l	abelled A, B and C?								
	A:	Skull or crani	um								
	B:	Rib									
	C:	Pelvis									
(c)	Wh	ich of the follo	wing types of joint is located be	etwe	en th	ne bo	nes	of pa	rt A ?		
	Imn	novable									
(d)	Wh	ich of the follo	wing types of joints describes a	hing	ge or	ball	and s	socke	et joii	nt?	
	Free-moving or synovial										
			Number of correct responses	1	2	3	4	5	6	7	
		Q5 (a) – (d)	Mark	3	6	9	12	15	18	20	

Ques	tion 6								20
6(3) + 2									
Indica	Indicate whether the statements are true or false: True							True	False
(a)	The stage of a light microscope holds the slide.							\checkmark	
(b)	Protein synthesis occurs on the ribosome.							\checkmark	
(c)	Animal cells have cell walls.								\checkmark
(d)	A tissue is a group of organs.								\checkmark
(e)	Immobilised enzymes can be reused.							\checkmark	
(f)	Osmosis is a special case of diffusion.							\checkmark	
(g)	g) Cell membranes are fully permeable.								\checkmark
	Q6 (a) – (g) Number of correct responses	1	2	3	4	5	6	7	
	Mark	3	6	9	12	15	18	20	

Question 7

5(4)

Choose **each** term from the following list and place it in Column B to match a description in Column A. The first one has been completed as an example.

	Column A	Column B
	Principle of experimentation	Safety
(a)	Possible explanation for an observation	Hypothesis
(b)	Used to test a hypothesis	Experiment
(c)	Comparison to a test	Control
(d)	Information and measurements collected during an investigation	Data
(e)	Supported hypothesis	Theory
